FORCE

Duty towards humanity

ERPZEROFORCE.COM

Introduction

Run your entire business on a smart ERP software!

ERP ZEROFORCE is a custom-built, cloud-based & industry-specific ERP software to provide complete business management & enterprise solutions to small & medium size companies. The software is further customized on client's requirements & implemented for better optimization of business operations.

Apart from building sustainable, efficient & creative software for common enterprise needs, we undertake complex software development tasks for specific operation of any business. The multi-module ERP is integrated with each other for efficient workflow & control in operations on micro & macro levels with better accountability & authority for the leaders.

The journey of ERP implementation starts by identifying the current obstacle faced, vision of the company & how the vision needs to be translated into missions, processes & tasks, we identify these to plan the development of the Custom-ERP.

Q. Isn't ERP software just advanced accounting software?

No, the ERP systems don't just handle accounting. Not only do they include inventory control, sales, purchasing, and other such functionality, ERP systems integrate these together – giving you improved visibility, scalability, and ease of use.

Q. Will your ERP solution integrate with third-party systems like our point-of-sales/eCommerce systems and with our bank's services?

Yes, if your third-party systems allows integrations to be developed via APIs. We will then work with these third-party vendors to integrate your ERP system with other systems, including point-of-sales and eCommerce solutions.

Q. Does your ERP systems come with reporting and analytics capabilities?

Yes, ERP ZEROFORCE come with comprehensive reporting and analytics features. You've also the option of enhancing these capabilities with discussion as planning stage, the pricing will effect based of complicated custom reports as well.

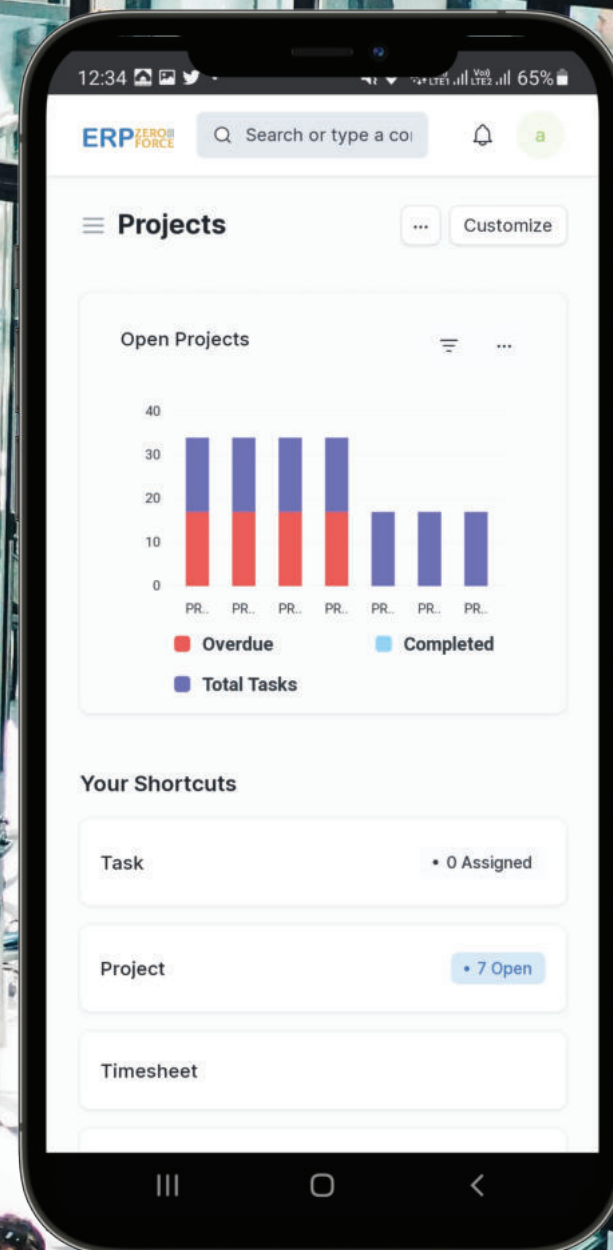

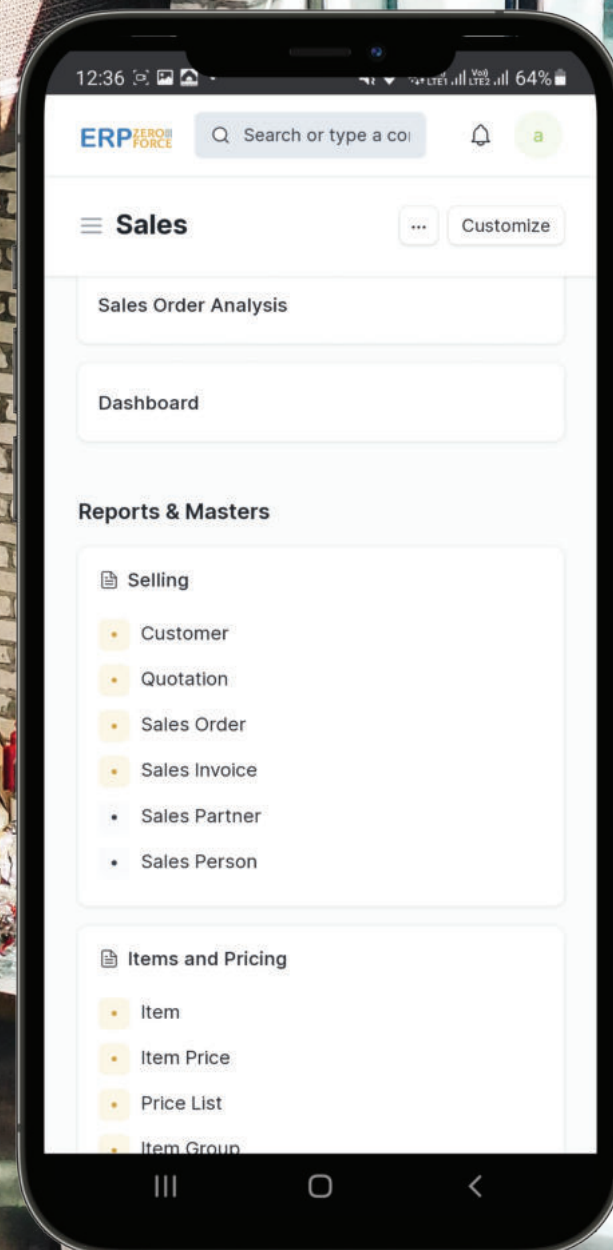

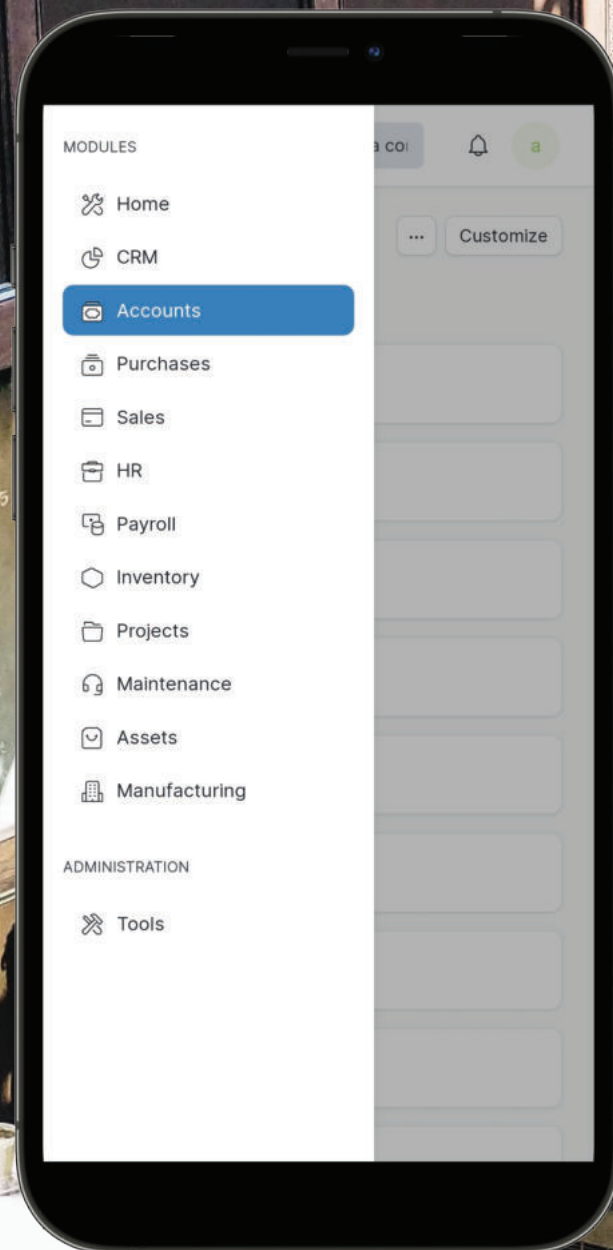

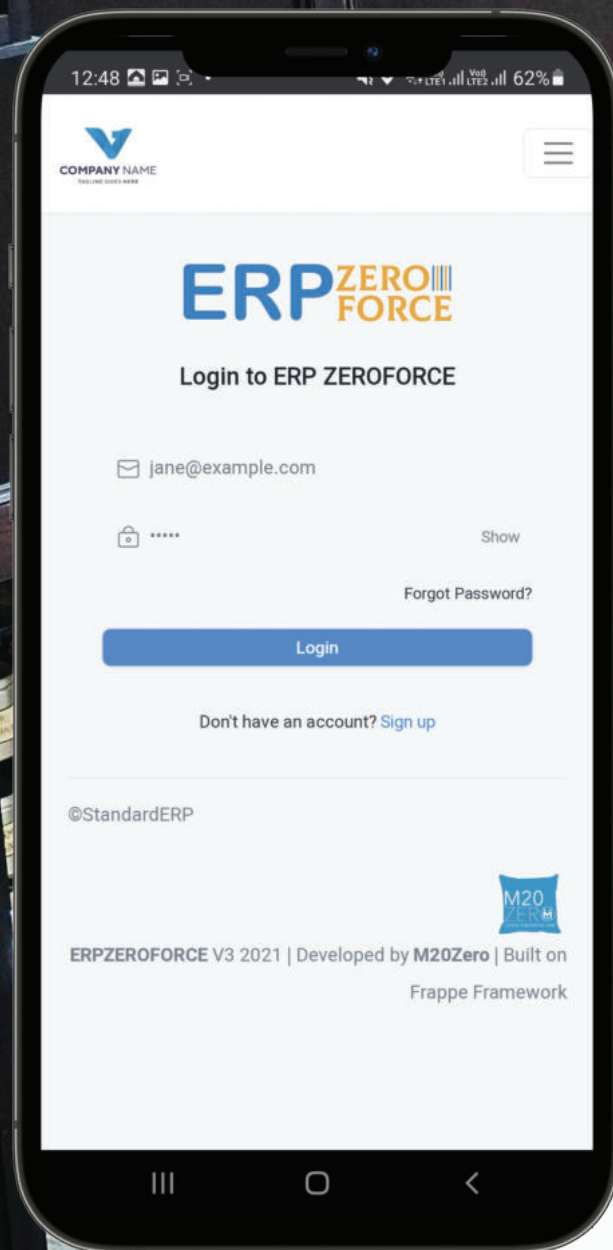

Q. How long does it take to implement an ERP system?

This is highly variable and depends on the scope of implementation. But on average, true cloud-based ERP systems are faster to get up and running.

GROUP ERP

Single software for multiple subsidiaries & companies under a single business group, the Group ERP software has options & modules developed to record transactions of different business types in a single software with individual reports & financial statements to each companies & restricted user permissions. The Group ERP also gives consolidated financial statements for analysis & better business decisions.

“According a survey, 47% of the organisations surveyed were in the process of or have completed implementing ERP software. As a start-up or SME, you might be doing well using a basic accounting or inventory software, but once your company hits a specific growth wall, it can become difficult to keep up with growing business needs. Your operations need to become more efficient and streamlined so your business can meet its full potential.”
